

# Innovative Vision Solution for Safer Driving

---

# AI 360° Surround View Monitoring System

When commercial vehicles or large trucks drive or reverse on crowded roads, the numerous blind spots can lead to collisions, posing a serious threat to the safety of vulnerable road users such as pedestrians, cyclists, and motorcyclists.

Designed specifically for trucks, buses, and special vehicles, this 360-degree panoramic imaging system features proprietary stitching algorithms, high integration, and a wide temperature range, operating from -20 to 70°C.

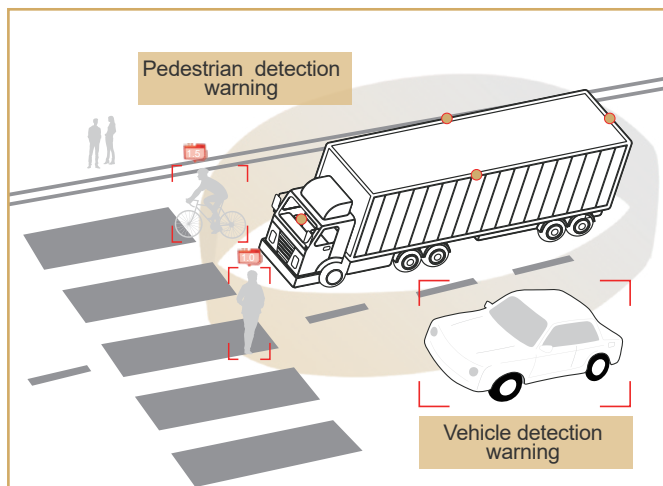

## VOX8-360

- 3D bird view around panoramic view, no blind spots around 360°
- Support AI Pedestrian & Vehicle Detection
- Supports SD card storage (8G-512G)
- Supports multiple video outputs, including CVBS/HDMI/VGA/AHD.
- 10.1" high-definition display, HDMI input, Full screen touch
- Supports 4~8 channels AHD camera
- GPS speed measurement function

## Vehicle Pedestrian Detection:

Built-in AI algorithms for 360-degree blind spot detection. It alerts drivers through the cabin monitor (visual)+ intelligent voice alert (audible), providing a comprehensive warning system. Additionally, it connects to external Acousto-optic alarm to warn pedestrians or non-motor vehicles entering the blind spot, enhancing overall driving safety.

## Content :

- 1 x 360box; 4 x fish-eye camera; 1 x HDMI monitor;
- 1 x remote control; 1 x Intelligent Voice alert; 1 x GPS antenna
- 1 x power cable; 1 x 3M/5M/7M/15M extension cable
- 1 x external Acousto-optic alarm(optional); 4 x Calibration cloth(optional)

## Application:

Reverse parking

Side parking

Blind spot during driving

Narrow Roads

Crowded roads

Blind spot at corners

# AI Thermal Infrared Imaging Camera System

The thermal infrared imaging camera is essential in conditions of low visibility and inadequate lighting, such as rain, fog, nighttime, or glare. These environmental challenges hinder drivers' ability to clearly identify pedestrians and vehicles, increasing the risk of safety accidents. Additionally, in complex engineering environments with challenging road conditions, traditional driving methods are insufficient for preemptively predicting safety risks.

- > Thermal Infrared Camera/ Visible Light Camera
- > Dual lens design, split display in the monitor
- > Built-in AI pedestrian & vehicle detection algorithm
- > Breaking the Night Barrier
- > Ultra Long Range
- > Anti-Far Glare Interference
- > Fog, Smoke & Haze Transmission
- > Resolution: 256\*192/384\*288

Single View Mode

Split View Mode

PIP Mode

PIP Mode

The thermal infrared camera possesses superior penetration capabilities, allowing it to overcome nighttime obstacles and effectively prevent glare from high beams, while penetrating fog, smoke, and haze. Additionally, it supports human and vehicle recognition algorithms, enabling it to issue timely alerts and provide enhanced safety.
